Introduction

This report contains statistical estimates related to Pronghorn Antelope hunting effort and harvest success, and the characteristics of Antelope harvested in Montana during license year 2000 (LY2000). It is based on an analysis and summary of the LY2000 statewide **Antelope Hunting and Harvest Survey** conducted following the hunting season (see **Survey Questionnaire enclosure**). Montana resident Antelope sportspersons were surveyed primarily by phone, while non-residents were surveyed by mail. Contact labels were generated for approximately **64%** of resident Antelope license holders, and **76%** of non-resident holders, at the time of sampling in late January. The overall resident rate for returning usable responses was **82%,** while the non-resident rate was **72%**. The resulting effective overall response rates for Antelope license holders were **45%** for residents and **46%** for non-residents.

Statistical estimates of the number of Pronghorn Antelope hunters, number of days devoted to Antelope hunting, and number of Antelope harvested are presented, as are relevant ratios such as percent success, and percent distributions of harvest by sex/age class, archery harvest, and time period. Statistics are presented by **Location** (Statewide, FWP Region, and Hunting District levels), by **Residency of hunter** (Residents, and Non-residents, and Combined) and by **Antelope License/Permit Type (L/P Type** or **Lpt)** (individual Lpt, lumped groupings of Lpts, and a category lumping all Lpts together). Confidence bounds at the 80% significance level are presented for key statistics. Counts of Antelope license sales and expansion factors used are presented.

Pronghorn Antelope hunting and harvest statistics are grouped into **three different table types**:

- **Antelope Hunting Effort and Harvest Success Table:** Number issued, expansion factors used, estimated total hunters, districts hunted, hunter days, and harvest. Confidence intervals on hunters and hunter days are given. Relevant ratios based on these statistics, including percent success, are also presented.

- **Antelope Harvest by Sex/Age Class and Bow:** Estimated total harvest, harvest by sex/age class, and harvest by bow vs. other means. Confidence intervals on harvest are given. Relevant percent distributions are also presented.

- **Antelope Harvest by Time Period:** Estimated total harvest, harvest by time period and percent distribution of harvest by time period are presented.

Sportspersons holding a privilege to hunt Antelope are referred to using three different terms. **Antelope Sportspersons** held a privilege (Lpt), or two, to hunt Antelope. **Antelope Hunters** took advantage of their privilege and expended effort hunting Antelope. **Successful Antelope Hunters** succeeded in harvesting one or more Antelope.

The **Location** categories **'Reg U'** and **'XXX'** refer to Antelope which were harvested somewhere in Montana, but in an unknown Region or hunting District. Locations **1XX...7XX** refer to Antelope harvested somewhere within a given Region, but in an unknown District. **Residency** (**Res**) is abbreviated as **R** (MT resident), **N** (non-resident), or **ALL** (without regard to residency).

License/Permit Types (L/P Type or Lpt) are presented at three levels. In LY2000 there were **96** special licenses issued and used in unique ways to manage Antelope in Montana. (There is no Antelope general license.) Each of these **specific Antelope Lpts** are identified by a unique **5 digit code.** These codes are listed and defined in the printed **2000 Antelope Hunting Regulations,** with the exception of one, the Region 7 Doe/Fawn Lpt issued to 70000 Either Sex holders. This Lpt was given the unique identifier **70090** in the **Sportsperson/License Database** and the **Hunting and Harvest Statistics Database.** It is formatted to Lpt=**R7 D/F** in this printed report. All 96 Antelope Lpt codes and their management use are summarized in **Appendix A**.

Antelope sportspersons in the Sportsperson/License Database by late January were randomly sampled from these 96 Lpt subpopulations using a variable sampling rate method intended to insure a minimum overall response rate by Lpt. Overall response rate (sales/sales to respondents) significantly influences the statistical precision of hunting and harvest estimates. All unsuccessful hunting effort reported by a survey respondent was linked to valid Lpt(s) held, based on reported District of kill. Each Antelope kill, and associated successful effort, reported by a survey respondent was linked to a valid Lpt held, based on reported District of kill, sex/age characteristics, and time/period of kill. Unsuccessful effort not assignable to a held Lpt due to invalid hunting District were assigned the code 9999H. (Presented in the report as Lpt=**UnknDist**.) Successful effort and kills not assignable to a held Lpt were assigned the codes 9999H indicating invalid hunting District, 9999K (Lpt=**UnknKill**) indicating invalid kill characteristics, or 9999L (Lpt=**UnknLpt**) indicating the respondent did not hold enough Lpts to cover all reported kills.

At the Statewide and Regional levels of Location, Antelope Lpts were lumped into **License Categories**. The Lpt=**Special** category grouped together all special Lpts except the 70090. The **70090** is reported as Lpt=**R7 D/F** in this report. The **Unknown** category lumps the three unknown Lpt definitions (UnknDist, UnknKill, UnknLpt) presented at the District level of Location.

The final level of License/Permit Type grouping, Lpt=**ALL**, indicates that hunting and harvest statistics were computed without regard to Lpt.

Expansion Factors for Pronghorn Antelope Statistics

All Pronghorn Antelope harvest statistics presented are estimates based on the underlying response set for a particular combination of the various levels of location, hunter residency, and license/permit type. **Summarized results from Antelope survey responses are expanded to estimated statistics based on the ratio of number issued to number issued to respondents within each of the License/Permit Type, Category, and for Lpt=ALL.** A low expansion factor (close to 1) indicates a high overall response rate, and relatively good statistical precision in the hunting or harvest estimate. Good statistical precision is reflected in relatively narrow 80% confidence bounds on the estimate. An expansion factor significantly higher than 1 indicates a low response rate, relatively poor statistical precision in the estimate, and relatively wide 80% confidence bounds on the estimate.

A second factor affecting precision of a hunting or harvest estimate is the raw number of Antelope survey responses reporting hunting activity, or harvest, for a given combination of Location, Residency, and Lpt. These survey response counts are multiplied by the expansion factor to obtain the hunting or harvest estimate. A higher total count of responding active hunters, or reported kill, will result in better statistical precision of the hunting and harvest estimates than lower counts.

Antelope hunting and harvest expansion factors were computed at all levels and groupings of location, hunter residency, and license/permit type. The number of tags issued, and the expansion factors used to estimate the hunting and harvest statistics, are presented in the **Antelope Hunting Effort and Harvest Success Tables**. Eighty percent confidence intervals on the hunter and harvest estimates are presented as an index of the relative precision of the estimates.

Antelope statistics presented at the higher groupings of Location, Residency, and Lpt are themselves estimates, not sums of the underlying estimates. They are based on expansion factors computed from ratios of tags issued to responses returned, given the particular grouping of location, residency, and license type. This explains why a harvest estimate for a given location, for a given residency, over all license types, may differ from the sum of the underlying license type estimates. The overall expansion factor used is the sum of the included sales divided by the sum of the included responses. The more heterogeneous the underlying populations, the more the overall estimates will vary from the sum of the underlying estimates. These "**Lpt=ALL**" estimates are made for the given location and residency without regard to Lpt.

Hunting and harvest statistics at the combined residency level are estimates when residency is disregarded. They are not simple sums of the resident and non-resident estimates. Resident and non-resident harvest estimates will not necessarily sum to the combined residency estimate. Similarly, separate estimates are computed at all three levels of location (District, Regional, and Statewide). Regional estimates are made without regard to reported District of activity within the Region. Statewide estimates are derived without regard to any reported District of activity.

Relative statistical precision will be better for estimates at levels and groupings of location, residency, and Lpt, where the response rate is relatively higher, and the total reported number hunting or number harvested is relatively higher. Total reported hunters and kill accumulate as the three grouping variables are lumped into higher levels. Therefore relative precision of the estimates improves. For example, precision in Statewide estimates will generally be better than precision in Regional estimates, which will generally be significantly better than precision in District level estimates. In general, the worst relative precision in the estimates occur at the finest level of response data splitting: for a particular hunting district, for residents or non-residents, for a particular individual Lpt. This is especially true for an Lpt issued to few hunters.

The practice of summing the estimates made at the finest level of data splitting has the disadvantage of accumulating relatively large errors in the sums of estimates corresponding to the higher data groupings. The magnitude of these accumulated errors are difficult to quantify. We cannot numerically compute our degree of confidence in the sums of estimates. The disadvantage of the current method used in the report, of computing separate estimates at all levels and groupings of analysis, is that we lose information regarding heterogeneity in the underlying Lpt subpopulations. For example, estimates made without regard to underlying Lpt will be most influenced by those underlying Lpt with high sales, such as the statewide Antelope Archery 90000, swamping out estimates for individual special Lpts with much lower sales. In using this report to look up harvest statistics for a given District, compare the sum of the estimates at the finest level of analysis with the estimates for the higher grouped levels. Be sure to also look at the confidence intervals on the estimates to assess relative statistical precision.

In some cases, at the most detailed summary level by Location, Residency, and License/Permit Type, **no response data** were returned. In these cases, the **expansion factor was undefined** (license holders divided by zero responses), and flagged in the tables as **–0.000**. All estimates of harvest statistics based on the undefined expansion factor are also undefined **(–0)**. In other cases, response data were returned, but no sportspersons reported any hunting, or harvest. This resulted in **undefined ratios**. These are also flagged as **–0.0**.

Antelope Hunting Effort and Harvest Success Table

The Antelope Hunting Effort and Harvest Success table presents basic Antelope hunting and harvest information, plus the factors used to expand the statistics to estimates, computed by location, hunter residency, and license/permit type.

- **Number Issued:** Number issued of the given Lpt.
- **Expand Factor (Expansion Factor):** The ratio of the number issued to the number issued to responding Antelope hunters for the given Lpt.
- **Hunters:** Point estimate of total number of active Antelope hunters.
- **Hunters Low Bnd:** Lower bound of 80% confidence interval on hunters.
- **Hunters Up Bnd:** Upper bound of 80% confidence interval on hunters.
- **Distric Hunted (Districts Hunted):** Point estimate of cumulative number of districts hunted by Antelope hunters. Meaningful only at the State and Regional location levels.
- **Hunter Days:** Point estimate of cumulative number of days or partial days spent hunting Antelope by active hunters.

- **H Days Low Bnd:** Lower bound of 80% confidence interval on hunter days.
- **H Days Up Bnd:** Upper bound of 80% confidence interval on hunter days.
- **Distric/Hunter (Districts Per Hunter):** Ratio of Districts Hunted to Hunters. An estimate of the average number of Districts hunted for Antelope by Antelope hunters. This ratio has meaning only at the State and Regional location levels.
- **Days/Hunter:** Ratio of Hunter Days to Hunters. An estimate of the average number of hunter days spent hunting by Antelope hunters.
- **Days/Distric (Days Per District):** Ratio of Hunter Days to Districts Hunted. An estimate of the average number of hunter days spent hunting per Antelope hunting District. This ratio has meaning only at the State and Regional location levels.
- **Success Hunters (Successful Hunters):** Point estimate of number of active hunters harvesting one or more Antelope.
- **SHunters Low Bnd:** Lower bound of 80% confidence interval on Successful Hunters.
- **SHunters Up Bnd:** Upper bound of 80% confidence interval on Successful Hunters.
- **Percent Success:** Ratio of Successful Hunters to Hunters, expressed as a percent. An estimate of the percent of active hunters harvesting one or more Antelope.
- **Harvest:** Point estimate of total number of Antelope harvested.
- **Days To Kill:** Ratio of Hunter Days to Harvest. An estimate of the average number of hunter days required to harvest an Antelope.
- **Kill Per Hunter:** Ratio of Harvest to Hunters. An estimate of the average number of Antelope harvested per active hunter.

Please note that estimates such as number of Hunters, Hunter Days, and Harvest are presented in the tables as rounded whole numbers, though they are actually computed and stored as high precision real numbers. Sums and ratios based on these estimates are also computed as high precision reals. Any subsequent calculations performed using the rounded estimates presented in the printed tables will lack the precision possible using the actual underlying estimates. Sums and ratios computed based on the rounded whole numbers presented will be subject to round off error. Whenever possible use the sums and ratios given in the tables. A data file of Antelope hunting and harvest statistics is available which retains much of the underlying precision of the estimates (see **Appendix B: Antelope Hunting and Harvest Data File Description**).

Antelope Harvest by Sex/Age Class and Bow Table

The Antelope Harvest by Sex/Age Class and Bow table presents harvest estimates and confidence bounds, distribution of harvest among sex age classes, and harvest by bow and arrow versus other means, computed by location, hunter residency, and license/permit type.

- **Harvest:** Point estimate of total number of Antelope harvested.
- **Harvest Low Bnd:** Lower bound of 80% confidence interval on total harvest.
- **Harvest Up Bnd:** Upper bound of 80% confidence interval on total harvest.
- **Harvest Unkn:** Point estimate of harvest of sex age class unknown.
- **Harvest Fawn:** Point estimate of harvest of sex age class fawns.
- **Harvest Doe:** Point estimate of harvest of sex age class does (non-fawn females).
- **Harvest Buck:** Point estimate of harvest of sex age class bucks (non-fawn males).
- **Pcnt Fawn:** An estimate of the percent of harvest which was sex age class Fawn.
- **Pcnt Doe:** An estimate of the percent of harvest which was sex age class Doe.
- **Pcnt Buck:** An estimate of the percent of harvest which was sex age class Buck.
- **Not Bow Kill:** Point estimate of harvest by a means other than bow and arrow.
- **Bow Kill:** Point estimate of harvest by bow and arrow.
- **Pcnt Bow:** An estimate of the percent of harvest taken by bow and arrow.

The sum of the totals given in the sex/age classes equals total harvest. However, the rounded estimates presented in the report may not exactly sum to this total due to round off error. Similarly, percent harvest by age class or bow calculated from the rounded estimates will not match the precision of the presented percents, which were calculated using the underlying real number estimates. When the Harvest estimate was zero or undefined for a given combination of Location, Residency, and Lpt, the row was dropped from the Harvest by Sex/Age Class and Bow Tables.

Antelope Harvest by Time Period

The Antelope Harvest by Time Period table presents estimated harvest and the distribution of harvest among 5 different time periods, plus a category where time period of kill is unknown. The time periods correspond to pre-season, and the 5 weeks of the general hunting season. Percent harvest by time period is also presented. Estimates were computed by location, hunter residency, and license/permit type.

- **Harvest:** Point estimate of total number of Antelope harvested.
- **Time Unkn:** Estimate of harvest where time period was unknown.
- **Before Oct 8:** Estimate of harvest during 1st time period, pre-season.
- **Oct 8 – Oct 15:** Estimate of harvest during 2nd time period, 1st week of general season.
- **Oct 16 – Oct 22:** Estimate of harvest during 3rd time period, 2nd week.
- **Oct 23 – Oct 29:** Estimate of harvest during 4th time period, 3rd week.
- **Oct 30 – Nov 5:** Estimate of harvest during 5th time period, 4th week.
- **Pcnt Unkn:** Estimate of percent of harvest where time period was unknown.
- **Pcnt Pre:** Estimate of percent of harvest during pre-season.
- **Pcnt Wk 1:** Estimate of percent of harvest during 1st week of general season.
- **Pcnt Wk 2:** Estimate of percent of harvest during 2nd week.
- **Pcnt Wk 3:** Estimate of percent of harvest during 3rd week.
- **Pcnt Wk 4:** Estimate of percent of harvest during 4th week.

The sum of the totals given in the unknown and the 5 known time periods equals total harvest. However, the whole number estimates presented in the report may not exactly sum to this total due to round off error. Similarly, percents by time period calculated from the rounded estimates will not match the precision of the presented percents which were calculated using the underlying real number estimates. When the Harvest estimate was zero or undefined for a given combination of Location, Residency, and Lpt, the row was dropped from the Harvest by Time Period Tables.

The 2000 Antelope Hunting Regulations Table

All reported Antelope hunting activity and Antelope harvest descriptions were linked to an Antelope license/permit type. This linkage was based on matching the reported District of hunt, or District of kill and kill description, to the Lpt(s) held by the responding Antelope hunter, and checking if the District, sex/age characteristics, and time period of kill matched the management usage of the Lpt as defined in the **Antelope Hunting Regulations Data table (Appendix A)**. Specific Antelope Lpts are identified by 5 digit codes as described above.

For each **hunting District**, valid usage of each **license/permit type** is defined by the following variables:

- **Date_Bgn:** The date the season opened.
- **Date_End:** The date the season closed.
- **Means of Take:** Some combination of **R**ifle, **A**rchery, **M**uzzleloader, and/or **S**hotgun.
- **Sex-Age:** The legal sex/age class of Antelope allowed by the license or permit.

- **Either Sex (E0):** Any Antelope is legal.
- **Doe/Fawn (E1):** Antelope must have horns less than 4" in length.

- **Regulation Description:** Information describing the Lpt and the specific management opportunity granted by the Lpt.
- **Regulation Comment:** Further information specific to the Lpt and its use.

Response Data Analysis Data Dependencies and Problems

The tables of estimates of LY2000 Antelope hunting effort and harvest success presented in this report were generated from the Antelope statistics table in the **Hunting and Harvest Statistics Database**. These statistical estimates are the product of data joins, manipulations, and analysis of three information resources:

- **Sportsperson/License Database (Spo/Lic DB):** Resident and non-resident sportspersons and the Montana hunting and fishing licenses they hold.
- **LptInfo and Regulations Database (Lpt/Regs DB):** Information regarding the License/Permit Types Wildlife Management uses to manage Deer, Elk, and Antelope in Montana, and all the various opportunities each Lpt affords the holder.
- **Survey Response Database (Response DB):** Sportspersons sampled, and response data returned, for the 11 standard Hunting and Harvest Surveys, and other supplemental surveys, conducted by Harvest Surveys annually.

The **Spo/Lic DB** is constructed from two basic sources:

- **Data entry from paper copies** of conservation licenses and over-the-counter licenses sold by agents or at FWP offices and remitted back to Licensing in Helena.
- **Data sets of successful applicants** for non-resident combo, moose-sheep-goat, deer-elk-antelope, and surplus drawings, **sent from Special Licensing**.

We expect all Special Licensing data sets, and at least 95% of over-the-counter paper license data, to be in the Spo/Lic DB by the 4th week of January. We sample sportspersons for 8 surveys (Deer, Elk, Antelope, Bear, Upland Game Bird, Turkey, Migratory Bird, and Archery) at this time. We try to begin survey interviews and mailings by late January. The earlier the survey interviews are conducted after the hunting seasons, the more accurately respondents will report their hunting and harvest.

Response interviews and mail returns are assembled and entered into the Response DB through spring. The Lpt/Regs DB is assembled from the Spo/Lic License Definition Table and the printed Regulations booklet during the autumn and spring, and is finalized as Deer, Elk, and Antelope analysis is performed.

A problem occurred which significantly impacted LY2000 Antelope analysis. The Spo/Lic DB did not receive substantial amounts of information regarding LY2000 Antelope Surplus Drawing issues, and over-the-counter surplus sales. This primarily impacted Doe/Fawn surplus Lpt sales, especially the R7 Doe/Fawn (70090) issued to 70000 holders. Substantial information regarding holders of these licenses is not in the Spo/Lic DB. Holder subpopulations sampled for these Lpts differed significantly from the true holder subpopulations. Sales counts for the affected Lpts were reconstructed from other sources, but respondent counts and Lpt linkage could be only partially reconstructed. Effort and kill linkage to Lpt of holders could differ significantly from reality for the affected Lpts. Estimates at the Lpt level, and at the District level in Districts where these Lpts were valid, will likely be affected adversely.

The Lpts of most concern are (**Lpt code:** Actual Sales, Sales in DB, % missing):

42002: 100,44,56.00; **43002:** 200,108,46.00; **45002:** 200,150,25.00; **47102:** 50,34,32.00; **48102:** 125,97,22.40; **49002:** 50,36,28.00; **49102:** 75,46,38.67; **60002:** 100,35,65.00; **63002:** 25,19,24.00; **64002:** 25,2,92.00; **65002:** 100,0,100.00; **67002:** 25,5,80.00; **69002:** 100,66,34.00; **70090:** 6000,889,85.18.

Appendix B

2000 Pronghorn Antelope Hunting and Harvest Statistics

Data File Description

Pronghorn Antelope
Hunting and Harvest Statistics

Description of Data File

License Year 2000

Montana Fish Wildlife and Parks

Harvest Surveys

October 10, 2001

This document contains a description of the License Year 2000 Antelope Hunting and Harvest Statistics data file. This file was exported from the original Oracle data table used to produce the tables presented in the **2000 Antelope Hunting and Harvest Report**. The data is distributed in a **Comma Separated Value ASCII text file** where character values are quoted and numeric values are not. Numeric values were exported to 2 decimal places. Headers are not included. The data files have the extension ***.Csv**. They are accompanied by ***.sch** files which define the file format and column types. This documentation is available in 3 formats, Word, Rich Text Format, and Simple Text (**AntelopeHHStatsData2000.Doc, *.Rtf, *.Txt**). Descriptions and column definitions for the data file are given below:

PaHh00_011010.Csv – LY2000 Antelope Hunting and Harvest Statistics Data Table as generated 10/10/2001

- **Loc (Location)**: **STA**=Statewide; **R01..R07,R09**=Regional 1..7,Unknown; ###=Hunting District (100,101,…), #99=Unknown district within region. 999=Unknown district and region.
- **Res (Residency)**: **ALL**=All residencies, **R**=Residents of MT, **N**=Nonresidents.
- **Lpt (License/Permit Type)**: **ALL**=all license/permit types combined. **License Categories** (groupings for State and Regional analysis) **C1SPE**=All special Lpts issued through special drawings. **C2D/F**=Special R7 over-the-counter Doe/Fawn Lpt issued to 70000 holders. **C9UNK**=Hunting effort or kills not assignable an Lpt held by the hunter. **License Types** (individual Lpts for District level analysis) #####= Special Lpts issued through special drawings. **70090**=Special R7 over-the-counter Doe/Fawn Lpt issued to 70000 holders. **9999H**=Hunting effort or kills not assignable an Lpt held by the hunter and valid in the reported District. **9999K**=Kills and associated effort is not assignable to an Lpt held by the hunter and valid in the District given the sex/age or time period reported for the kill. **9999L**=Kills and associated effort not assignable to an Lpt held by the hunter because all Lpts have already been assigned to other kills reported by the hunter.
- **Sort_Loc, Res, Lpt:** Assist in sorting the records by the 3 variables defined above.
- **Sales (Number Issued)**: Number of Pronghorn Antelope licenses/permits issued.
- **Exp_Fact (Expansion Factor)**: Number issued divided by number held by Antelope survey respondents.
- **Hunt (Hunters)**: Point estimate of number of sportspersons actively hunting Antelope.
- **Hunt_L (Hunters Lower Bound)**: Lower 80% confidence bound on active hunters.
- **Hunt_U (Hunters Upper Bound)**: Upper 80% confidence bound on active hunters.
- **DistHunt (Districts Hunted)**: Sum of number of districts reported used by all active Antelope hunters.
- **HDays (Hunter Days)**: Sum of number of days or partial days spent hunting Antelope by all hunters.
- **HDays_L (Hunter Days Lower Bound)**: Lower 80% confidence bound on hunter days.
- **HDays_U (Hunter Days Upper Bound)**: Upper 80% confidence bound on hunter days.
- **SucHunt (Successful Hunters)**: Point estimate of number of active hunters taking one or more Antelope.
- **SucHunt_L (SucHunt Lower Bound)**: Lower 80% confidence bound on successful hunters.
- **SucHunt_U (SucHunt Upper Bound)**: Upper 80% confidence bound on successful hunters.
- **Harv (Harvest):** Pt estimate of number of Antelope harvested.
- **Harv_L (Harv Low Bnd)**: Lower bound of 80% confidence interval on harvest.
- **Harv_U (Harv Up Bnd)**: Upper bound of 80% confidence interval on harvest.
- **PctSucc (Percent Success)**: Percent of hunters that were successful (harvested 1 or more Antelope).

- **HarvU (Harvest Unknown):** Pt estimate of number of Antelope harvested of sex/age class unknown.
- **HarvY (Harvest Young):** Pt estimate of Antelope harvested of sex/age class young of year.
- **HarvF (Harvest Female):** Pt estimate of Antelope harvested of sex/age class non-young females.
- **HarvM (Harvest Male):** Pt estimate of Antelope harvested of sex/age class non-young males.
- **TP_U (Kill Time Unkn):** Estimate of Antelope harvested where time period was unknown.
- **TP_1 (Kill Time Period 1):** Estimate of Antelope harvested during pre-season.
- **TP_2 (Kill Time Period 2):** Estimate of Antelope harvested during 1st week general season.
- **TP_3 (Kill Time Period 3):** Estimate of Antelope harvested during 2nd week.
- **TP_4 (Kill Time Period 4):** Estimate of Antelope harvested during 3rd week.
- **TP_5 (Kill Time Period 5):** Estimate of Antelope harvested during 4th week.
- **BO_N (Not Bow Kill):** Estimate of Antelope harvested by means other than bow and arrow.
- **BO_Y (Bow Kill):** Estimate of Antelope harvested by bow and arrow.

Various meaningful ratios and percents further describing Pronghorn Antelope hunting and harvest can be computed based on these provided statistics. Please refer to the **LY2000 Pronghorn Antelope Hunting and Harvest Report** for definitions of these ratios and percents and examples of their use.

Pronghorn Antelope Hunting and Harvest Statistics were computed for certain combinations and groupings of values of the 3 variables Loc, Res, and Lpt:

Loc	Res	Lpt	Explanation
STA	ALL	ALL	Statewide, combined res and lic category.
STA	R&N	ALL	Statewide, by res, combined lic category.
STA	ALL	Lp_Cat	Statewide, combined res, by lic category.
STA	R&N	Lp_Cat	Statewide, by res and lic category.
R01..R07,R09	ALL	ALL	Regional, combined res and lic category.
R01..R07,R09	R&N	ALL	Regional, by res, combined lic category.
R01..R07,R09	ALL	Lp_Cat	Regional, combined res, by lic category.
R01..R07,R09	R&N	Lp_Cat	Regional, by res and lic category.
Hdist ###	ALL	ALL	By District, combined res and lic type.
Hdist ###	R&N	ALL	By District, by res, combined lic type.
Hdist ###	ALL	Lp_Type	By District, combined res, by lic type.
Hdist ###	R&N	Lp_Type	By District, by res and lic type.
